UpNotice is a web application acts as an one directional communication tool by which user can create or subscribe channels and subscribed users can get notification of those channels through their email address or through website.

Installation Process:

Import upnotice.sql file into your phpmyadmin through import button. Open persistence\connection.php file and replace below information according to your settings:

```
your_db_name

your_db_username

your_db_password
```

Upload all the files and folders to your hosting and there you go!
